A quieter identity. Clear at every size.

Nature, meditation and farm life, expressed as a coherent visual system.

One emblem. Three language editions.
A responsive full and micro icon system.
All standalone icons remain transparent.

Warm editorial type, legible interfaces,
clear production rules and source files.

Start with the HTML guide for actual-size
favicon proofs, CSS and live font samples.

Choose the right lockup

English, Kannada and bilingual sets each include four layouts and four colour versions.

ENGLISH

Full / primary / horizontal / wordmark

Colour / forest / black / white

KANNADA

Full / primary / horizontal / wordmark

Colour / forest / black / white

BILINGUAL

Full / primary / horizontal / wordmark

Colour / forest / black / white

Horizontal logos are for website headers. Wordmarks omit the emblem.

Primary omits supporting lines. Full is for spacious editorial and print placements.

Transparent icon family

Brand identification stays independent of language and typography.

FULL EMBLEM / 48 px and above
Inner heart, leaf and ground swoosh.
Use for app artwork and avatars.

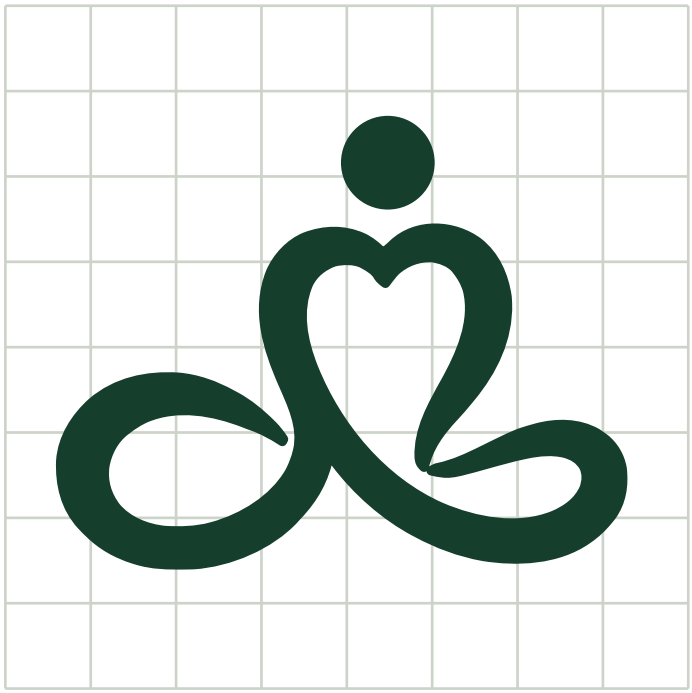

MICRO MARK / 16-32 px
Head and seated heart silhouette.
Thin secondary details are removed.

Every SVG, PNG, WebP, TIFF and ICO icon has transparent negative space.
Forest, black and white icon masters are supplied. Preview surfaces are not baked into artwork.

Keylines & small-size behaviour

Derived from Material principles; the Aroha emblem remains the brand asset.

SQUARE MASTER / 64 units

Visible micro artwork fits 56 units across.

Keep the head optically centred over the body.

Do not add a surrounding badge to the master.

FAVICON / 16, 24, 32 px

Use the micro silhouette. Review at 100% scale.

Use forest on light chrome and white on dark.

The adaptive SVG responds to the colour scheme.

See the HTML guide for actual pixel-sized proofs.

Spacing & usage sizes

Starting recommendations, to be checked against viewing distance and material.

Full lockup: 640 px / 110 mm. Primary: 320 px / 60 mm.
Horizontal: 280 px / 55 mm. Wordmark: 240 px / 45 mm.
Full symbol: 48 px / 12 mm. Micro: 16-32 px, screen only.

Full emblem / logo clear space: at least one head-diameter outside visible art.
Wordmark clear space: at least half the English A cap-height.
No stretching, arbitrary colours, rotation, effects or busy photo backgrounds.
Embroidery and engraving need a fabricator proof of the narrowest internal gaps.

Typography with a purpose

Four script-specific families form two roles: editorial display and readable interaction.

Return to Yourself

LORA / 500 and 600
Calligraphic curves and moderate contrast give headings a warm editorial voice.
Use for English display, headings and AROHA. Keep it out of small control labels.

SOURCE SANS 3 / 400 and 600
A humanist sans designed for interfaces. Use for reading, navigation, dates, forms and buttons.
RETREAT and English supporting lines use this family.

NOTO SERIF KANNADA / 500 + NOTO SANS KANNADA / 400 and 600
Serif for Kannada editorial headings; sans for reading and interaction. No Kannada tracking.
The supplied Kannada logo lettering remains fixed outlined artwork, not substituted live type.

Type scale & bilingual rhythm

Use the same hierarchy across scripts while allowing Kannada its own vertical space.

DISPLAY 56/64 px / weight 500

H1 40/48 px / weight 500

H2 32/40 px / weight 500

H3 24/32 px / weight 600

BODY 18/28 px / weight 400

BODYSMALL 16/24 px / weight 400

LABEL 16/24 px / weight 600

CAPTION 14/20 px / weight 400

ನಿಮ್ಮೊಳಗೆ ಮರಳಿ

Kannada headings: line height at least 1.5; body 1.65. Mobile display 40/48; controls at least 16/24.

Colour & accessible interaction

Forest leads; leaf and bronze are accents, with ivory and mist as quiet surfaces.

Forest
#163E2D
RGB 22 / 62 / 45
CMYK 65 / 0 / 27 / 76

Leaf
#60833D
RGB 96 / 131 / 61
CMYK 27 / 0 / 53 / 49

Bronze
#86613B
RGB 134 / 97 / 59
CMYK 0 / 28 / 56 / 47

Ivory
#FAF7EF
RGB 250 / 247 / 239
CMYK 0 / 1 / 4 / 2

Mist
#DDE5D7
RGB 221 / 229 / 215
CMYK 3 / 0 / 6 / 10

Use forest for small text and primary actions. Leaf is not approved for small text on ivory.
Aim for 4.5:1 normal text and 3:1 large text / meaningful control boundaries.
48 px minimum targets. 3 px focus ring with 4 px offset. Persistent field labels.
4 px spacing base; 8 px control corners. Error states use text as well as colour.
180 ms subtle colour changes; respect reduced motion.

Digital implementation

Ready-to-copy web files and separate Android resources are included.

BROWSER / SEARCH

03-digital/web: favicon.ico, favicon-adaptive.svg, favicon-96.png and head-snippet.html.

Use stable, crawlable URLs. Search visibility is not guaranteed by having a file.

WEB APP / TOUCH

Transparent 180, 192 and 512 px icons. Web manifest icons use purpose any, not maskable.

Launchers can add their own surfaces. Validate on the actual target devices.

ANDROID ADAPTIVE

Foreground and monochrome artwork are 108dp layers; logo content stays inside the safe region.

res/ includes drawable vectors, v26/v33 adaptive XML and a separate background colour.

Add android:icon="@mipmap/ic_launcher" to the application manifest.

STORE SUBMISSIONS

No opaque store icon is included. Create a dedicated platform composite from transparent art.

Print, fonts & production handoff

Use the package source of truth and keep production acceptance explicit.

SVG / PDF / EPS: outlined vectors. No fonts or linked bitmaps are needed to render a logo.
PNG / WebP / TIFF: transparent raster artwork. TIFF includes 300 dpi metadata.
05-print: generic CMYK conversions, no press ICC profile or PDF/X certification.

Font bundle: original variable TTF and WOFF2, plus static 400 / 500 / 600 print instances.
Every original SIL Open Font License is included beside its family. Keep those files with redistribution.
The English wordmarks are Lora 600; the Kannada brand name is original outlined lettering.

No native AI/CDR/PSD files, spot-ink matching, trademark clearance or store submission is claimed.
For print, convert with the actual press/paper ICC profile and approve a physical proof.
For native launchers and store artwork, validate in the platform toolchain before publishing.

V2 supersedes V1. Do not mix wordmark typography or favicon assets between versions.

Sources & reference boundaries

Checked 31 October 2026. Material-informed; no affiliation or Google certification.

Material Design / product icon principles
Historical Material reference: simple silhouettes, keylines, optical consistency; no legacy shadows adopted.

Material Design 3 / icon overview
Current landing page; JavaScript-only in text fetch. Detailed dimensions taken from Android documentation.

Android adaptive icon specification
108dp layers, safe content placement, separate foreground/background and monochrome.

Google Play icon specification
512px square sRGB PNG; platform mask and shadows. Store upload needs a separate opaque composite.

Google Search favicon guidance
Square, stable URL, crawlable; 96px PNG supplied for search.

Lora / official description
Calligraphic curves, moderate contrast, screen and print use.

Source Sans 3 / official description
Interface-oriented sans serif.

Noto Serif Kannada / official metadata
Kannada serif family and OFL license.

Noto Sans Kannada / official metadata
Kannada sans family and OFL license.

WCAG 2.2 / text contrast
Normal text 4.5:1; large text 3:1. Logos are exempt, but interface text is not.

WCAG 2.2 / non-text contrast
Meaningful control boundaries and graphics need 3:1 against adjacent colours.

Clickable reference titles link to the official sources. Full URLs and notes are in Sources.md and the HTML guide.

White space. Natural movement.

White is primary. Warm ivory is optional. Exported icon backgrounds stay transparent.

Motion has a purpose: feedback, spatial consistency or a clear state change.

Use nature as a timing and proportion reference, not as constant ornament.

LEAF SETTLE / 240 ms

An occasional entrance settles through 8 px of vertical travel and two degrees of rotation.

SEED UNFOLD / 240 ms

A panel arrives from 96% scale and 6 px below, anchored at its base.

WATER RESPONSE / 140 ms press / 220 ms ring

Pointer press feedback is immediate. Decorative rings expand gently and fade.

PATH REVEAL / 200 ms with 30 ms segment stagger

A short route or next step becomes legible in sequence without moving reading text.

Motion tokens & safeguards

Open Nature-Motion.html for working samples, surface comparison and opt-out controls.

Easing: cubic-bezier(0.23, 1, 0.32, 1). UI effects stay below 300 ms.
Properties: transform and opacity only. No layout animation or JavaScript frame loop.
CSS transitions handle interruptible production hover, press and reveal states.
WAAPI handles the deliberately replayable explanatory samples without a motion dependency.

Keyboard: instant final state. Reduced motion: 150 ms opacity-only feedback.
Fine-pointer hover gating ships with the CSS. No touch hover transforms.
Stop control, motion opt-out and tab hiding cancel owned preview animations.
No autoplay, infinite loops, parallax, loading rings that imply false progress or moving form fields.

Files: nature-motion.css, nature-motion.js and nature-motion-tokens.json in 06-system/.
Keep production component state and accessibility semantics in the application.
Validate normal speed, interruptions, keyboard, touch and reduced motion before release.
Desktop checks do not establish frame-rate performance on a representative phone.
