A living design language.

A practical system for an Aroha Retreat website: language-specific identity, quiet typography, transparent icons and nature studies.

White is the default.

Use #FFFFFF for primary page surfaces. Warm ivory #FAF7EF is an optional editorial accent, never baked into a logo or service icon. Dark surfaces require the white logo edition.

Illustration has a job.

The leafscape explains the retreat as an interconnected landscape. The growth study explains emergence and cultivation. Use them in an introduction or story section; keep controls and reading areas clear.

Natura and Aroha have separate roles.

Natura names this design system and application. Aroha Retreat remains the brand on all retreat logos. English-only, Kannada-only and bilingual lockups remain separate assets; approved wording is preserved.

Choose by role.

Typography and colour support bilingual reading and calm, useful interactions.

Lora / English editorial

Use Lora 500 for page titles and narrative headings. Its serif forms provide a literary, organic tone. Keep paragraphs in the simpler body family rather than decorating every surface.

Source Sans 3 / English interface

Use 400 for body text and 600 for labels and controls. Its open forms and clear hierarchy suit dense documentation and service information. Body: 18/28 px; compact: 16/24 px.

Noto Serif Kannada / Kannada editorial

Pair with Lora by role, not by forcing identical glyph heights. Allow Kannada its own line height and test complete words. The brand wordmarks are outlined and do not depend on installed fonts.

Noto Sans Kannada / Kannada interface

Pair with Source Sans 3 for controls and longer Kannada text. All four families ship locally with OFL licences. Preserve these licences in website exports.

Forest	Leaf	Bronze	Mist	White
#163E2D	#60833D	#86613B	#DDE5D7	#FFFFFF

Build with the system.

Use the live workspace at aroha-retreat.web.app/design/ as the current handoff.

A complete asset set

The complete ZIP contains outlined logo vectors and print exports, transparent raster logos, icon-only marks, favicon resources, font files and licences, 48 service icons, two illustrations, four scene SVGs and their JavaScript controller.

Website builder contract

Edit, reorder and preview up to 16 sections. Add either botanical illustration to a story section. Export JSON to transfer a draft or a website ZIP containing HTML, CSS, logo, selected artwork, local fonts and licences. Drafts stay in this browser; moving origins requires JSON export/import.

Motion and accessibility

Scenes play only after an explicit action and have pause, replay, speed and timeline controls. Reduced motion shows the final composition immediately. Routine UI feedback stays around 140-240 ms. Use visible focus and at least 48 px control targets.

Production boundaries

The builder exports a development starter. Confirm retreat copy, contact details and services before publication. Booking, payments, authentication and submission handling are separate implementation work. The Firebase design app does not initialize Analytics.
